

## Ars politica

**Title:** Ars politica

**Abstract:** Living together, people have learned to comply with a set of common laws. Politics is the art of adapting the structure of society to the ideals of justice, morals and progress. The secret of a truly political behaviour and the ability to govern lay in the initiatives to conceive the reforms suited to the needs of our time from a broad political perspective. It all depends on the election of the nation's representatives. This requires political parties, which are nothing else than free associations of citizens - united by common interests and ideas - which aim to assume government to achieve an ethical and social goal. Society has political parties in its own image. Three elements contribute to any party's unity: leadership, program and methods of struggle and propaganda. The clearest difference is given by the way in which a party focuses on the individual or the community.

**Keywords:** Politică, societate, partide politice, opinie politică, individ, colectivitate, reformă politică
